9th September 2026

VETERINARY REPORT FOR 'HANSEATIC X WANAASA 24'

Signalment:

2-Year-Old Bay Thoroughbred Colt

Microchip:

985100012246919

Brands:

NSS: Lazy A 7 1

OSS: 4 OVER 4

I examined the above-described horse at Hawkesbury Racecourse on the 9th September 2026. A clinical examination was performed. No other ancillary aids (i.e. radiography, endoscopy, electrocardiography, ultrasonography) were utilised.

My examination revealed a colt:

- With two descended testicles.
- With a normal temperature.
- Without nasal discharge.
- Shod on both front feet.
- Not lame at the walk nor trot in a straight line.
- With mild effusion of both right and left middle carpal joints and mild effusion of both left and right tarsocrural joints, but no other obvious joint effusion in the distal limbs or abnormality noted on palpation of the tendons and ligaments of the distal limbs.
- Without any detectable abnormality on auscultation of the cardiothoracic region.
- With two pinprick areas of corneal oedema in the centre of the right eye- the eye did not appear painful and the pupil was adequately dilated with no notable abnormalities within the left eye. Papillary light reflexes and menace response were within normal limits and the horse appeared to have adequate vision.

Based on this examination, I consider the horse a suitable subject for syndication.

This certificate may be relied upon by potential investors, however it does not constitute a "pre-purchase" examination. I certify that I have no current, nor contemplate any future interest in the horse, other than to supply a veterinary opinion of the suitability for racing. Furthermore, I am aware that this report may be used by Blueblood Thoroughbreds for the purposes of syndicating and selling shares in the horse described above.

Please contact the clinic should you have any queries regarding this report.
